THink DWanay: Memory
made visible

Introduction

We are applying the function of memory in
a human brain to the actual workplace

The is guide template helps you follow a
sequence that prepares you on how to view
the data.

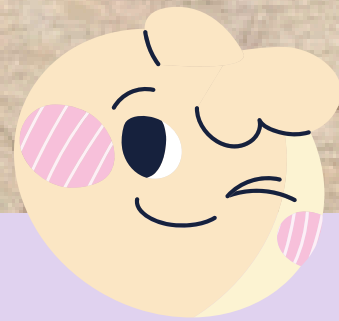

The encoding

The Storage

The retrieval

Memory made visible

Brief descriptions

1

The encoding.

2

The storage

3

The retrieval

1

The encoding.

This is where the dataset captures what people valued enough to act on.

1. **What did they value?**
2. **What did that value make them do?**
3. **What did it cost them?**

2

The storage

Storage is not about keeping the data, but about what we keep paying to hold on to it.

1. **What did we choose to keep?**
2. **What did we choose to discard?**
3. **What is that costing us now?**

3

The retrieval

This is how we view the goal and attempt. We don't retrieve what is true. We retrieve what we need to be true to act.

1. **What are we trying to retrieve?**
2. **What question brings it back?**
3. **What will we do with it once we find it?**

Mind Map

Let's begin!

Are
you
ready?

Topic: _____

1

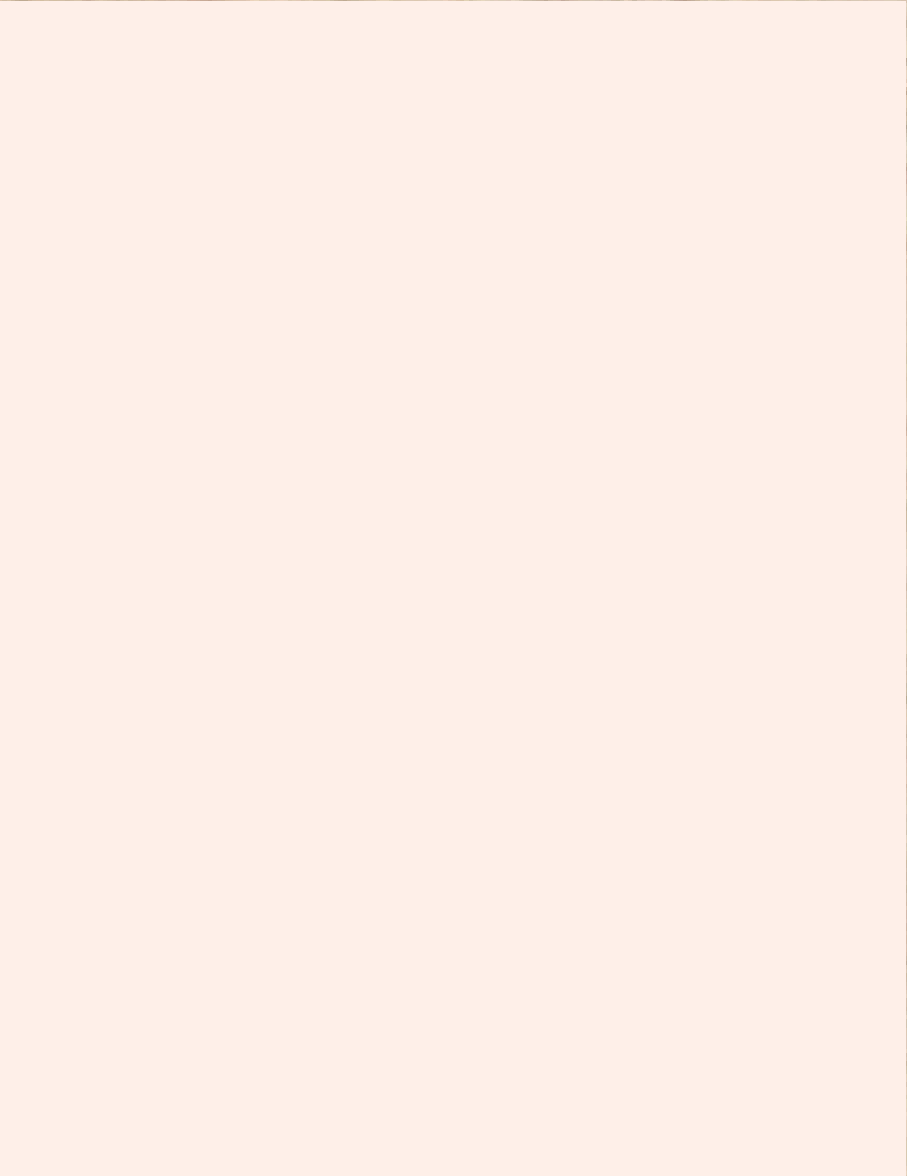

The encoding

What did they value?

What did that value
make them do?

What did it cost
them?

Topic: _____

2

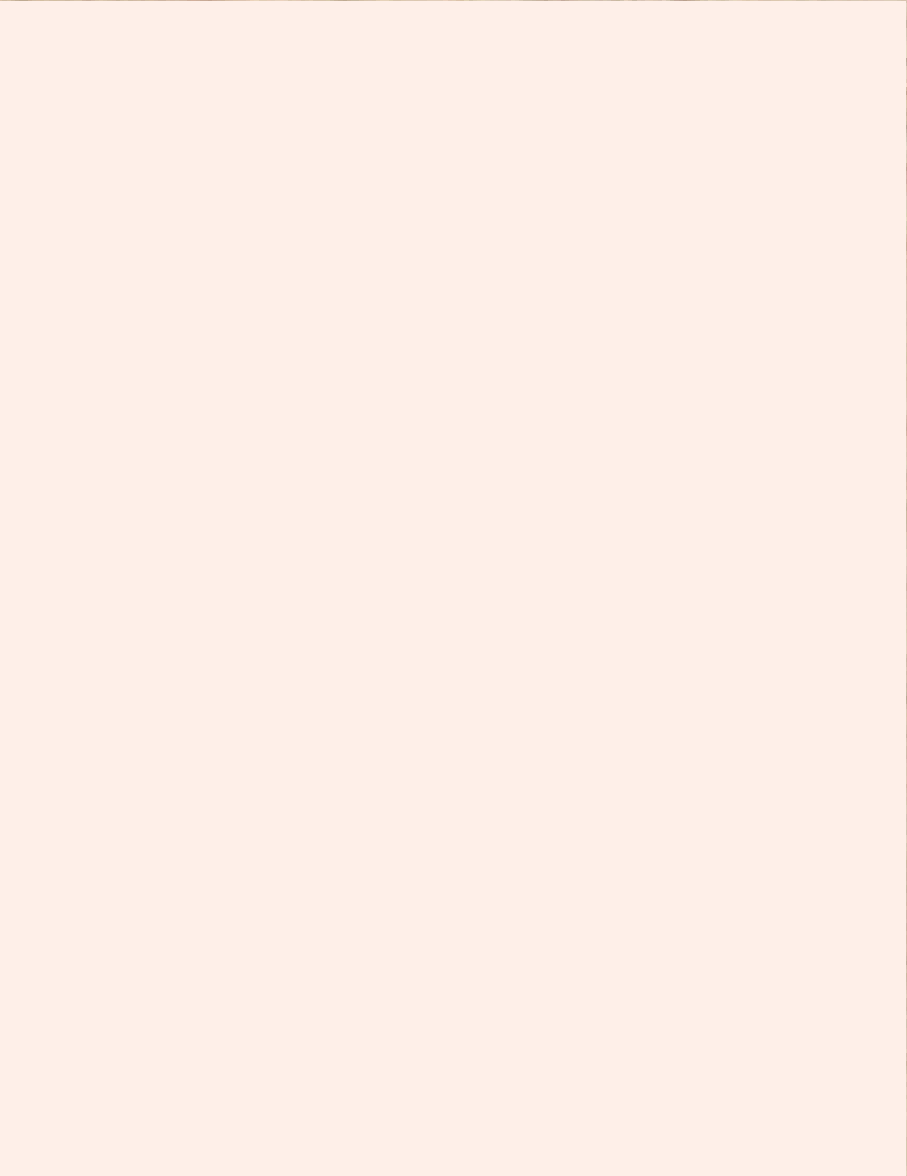

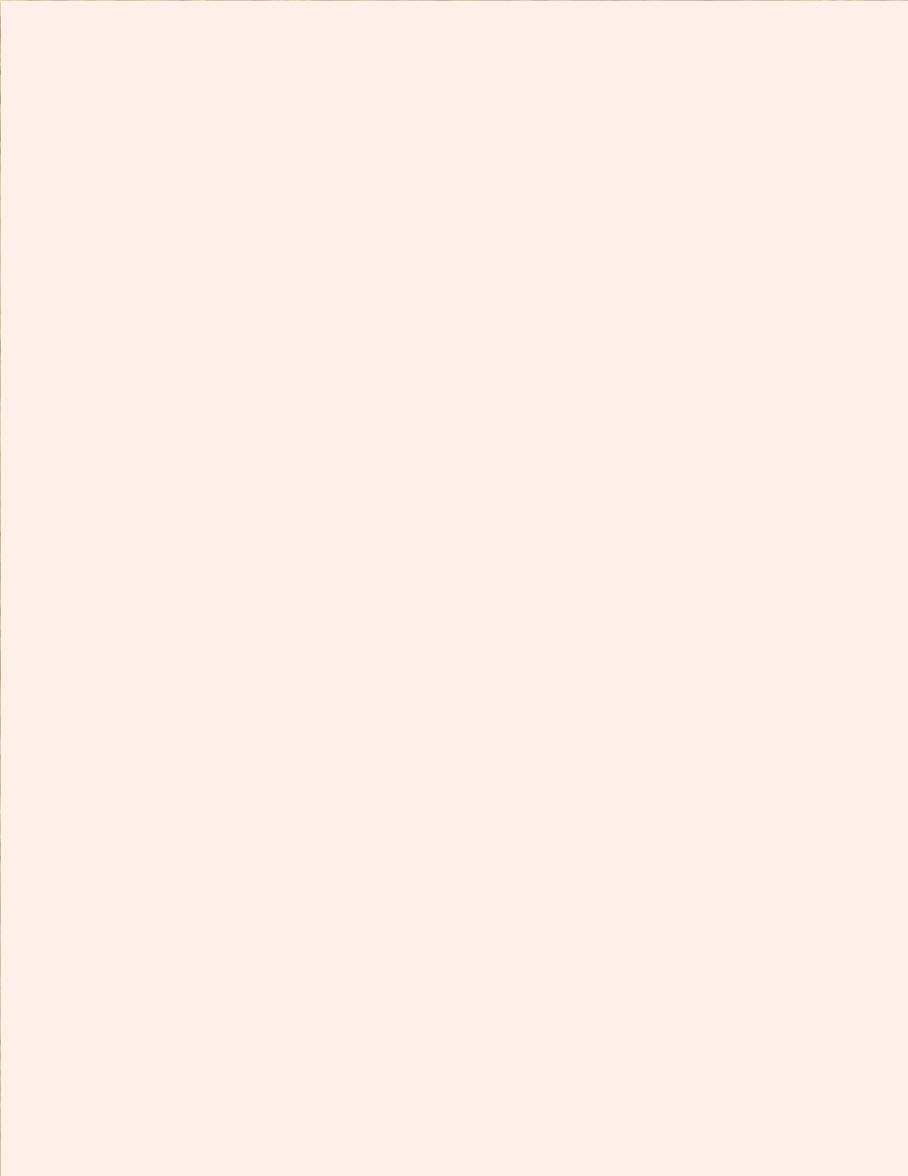

The Storage

What did we choose to keep?

What did we choose to discard?

What is that costing us now?

Topic: _____

3

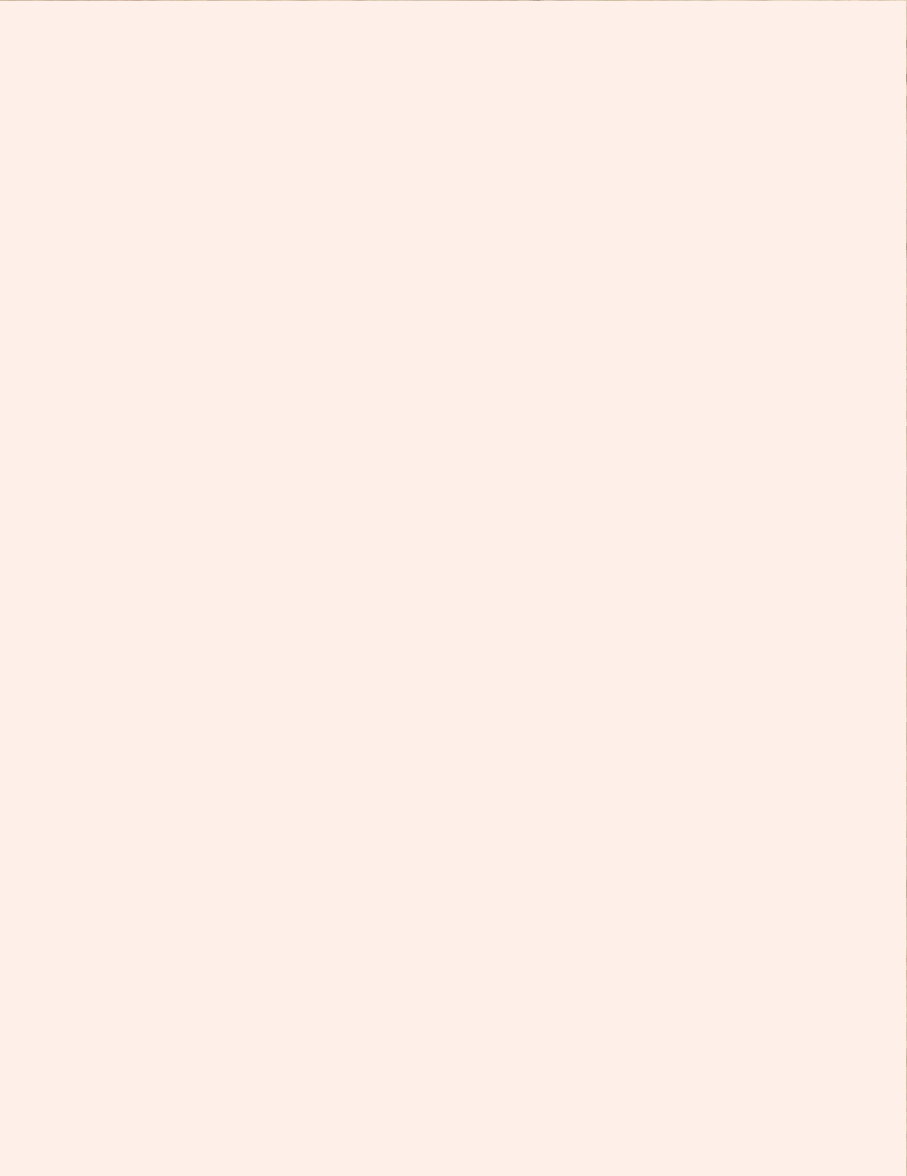

The retrieval

What are we trying to retrieve?

What question brings it back?

What will we do with it once we find it?
